(PRIOR ART)

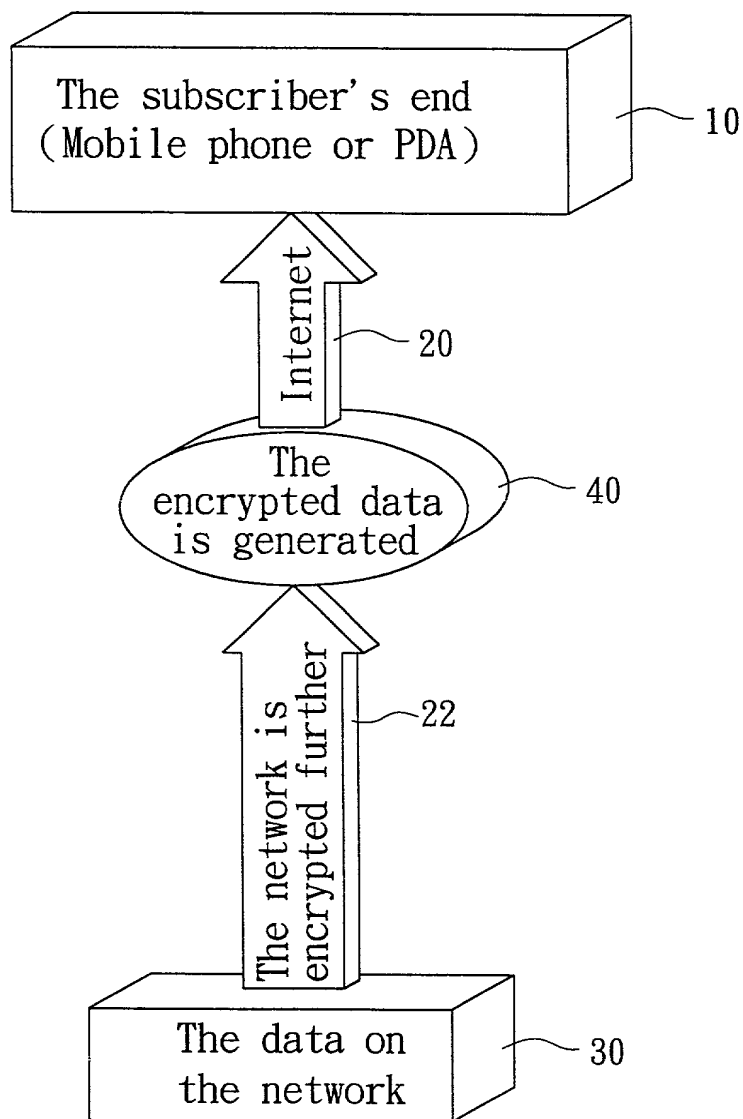

FIG. 2

```
graph TD; 100[The user is connected to servo] --> 110[User inputs a series number to an access device]; 110 --> 120[The servo encrypts the captured data according to the encrypting key generated from the series number, and then the decrypt is transferred to the access device]; 120 --> 130[The user transfers the downloading data to the access device]; 130 --> 140[The access device decrypts the receiving data and uses the data];
```

The flowchart illustrates a five-step process for data transfer:

- 100 The user is connected to servo
- 110 User inputs a series number to an access device
- 120 The servo encrypts the captured data according to the encrypting key generated from the series number, and then the decrypt is transferred to the access device
- 130 The user transfers the downloading data to the access device
- 140 The access device decrypts the receiving data and uses the data
